

Robutec®

Reinforcement and
separation fabric
for high specification
applications

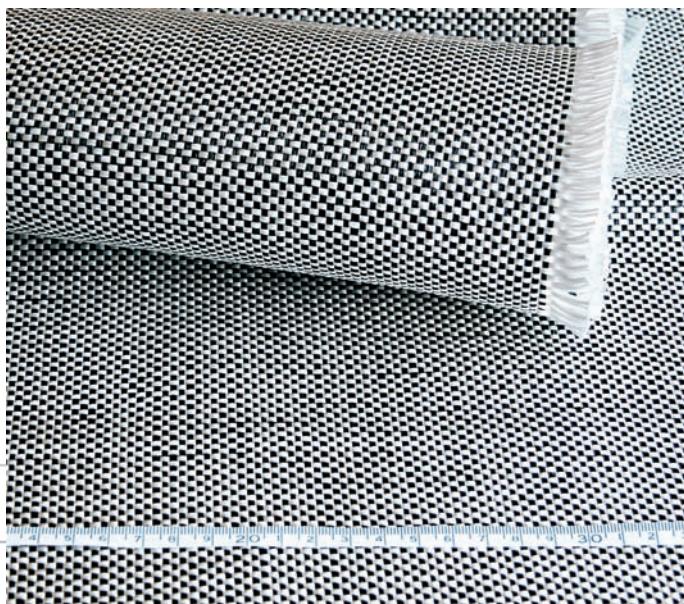

HUESKER

Ideen. Ingenieure. Innovationen.

Robutec® - soil reinforcement in demanding situations

Manufactured from polyvinyl alcohol (PVA), Robutec® is a high modulus, low-creep, alkali-resistant reinforcement fabric.

Robutec® has many advantages compared with products made from other polymeric materials:

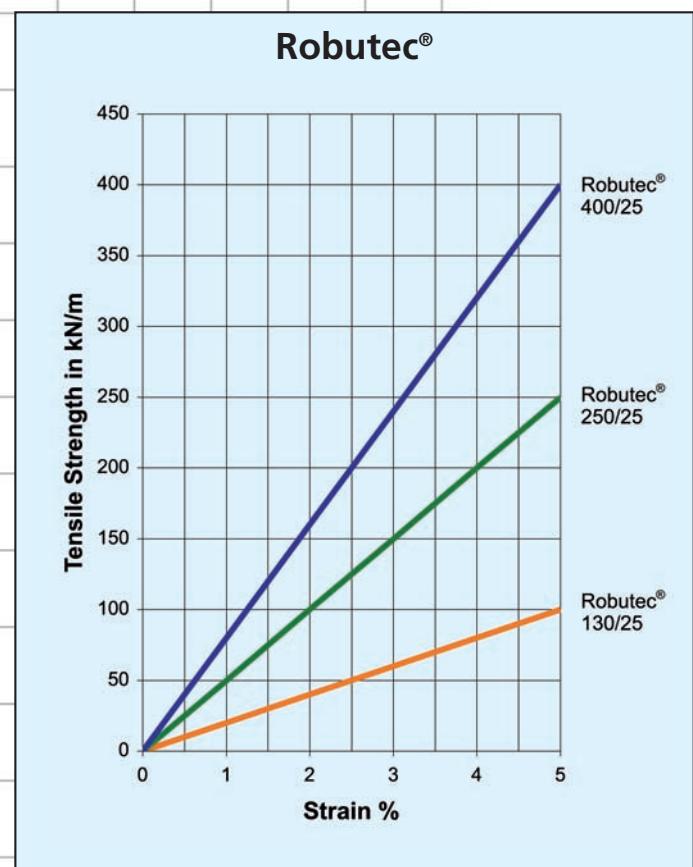

- ➡ resistance in alkaline (pH-value range 2-14) environments
- ➡ immediate load take-up with very low elongation
- ➡ modulus up to and beyond 36000 kN/m
- ➡ tensile strengths up to 2200 kN/m (uniaxial) and 500 kN/m (biaxial) in both directions
- ➡ very low creep
- ➡ high resistance to mechanical damage

Robutec® - applications in earthworks, foundations and landfill

Robutec® is used as soil reinforcement in situations where conventional products or materials cannot fulfil high project-specific requirements.

Areas of application include geotechnically very demanding construction projects where low deformation plays a crucial role.

Robutec® should be used where reinforcement is installed in very high, or low, pH-value environments.

Tensile stress/strain graphs for standard Robutec®

Robutec®- applications in earthworks, foundations and landfill

Examples of Robutec® applications

- embankments on soft ground
- piled embankments and similar earthworks structures
- bridging of underground voids (subsidence pits, sinkholes)
- filling or capping of sludge lagoons
- soil stabilisation in contaminated ground, e.g. for land reclamation
- soil reinforcement in cement-stabilised soils
- soil reinforcement in alkaline environments (raised bogs, sulphur-rich marshland etc.)
- landfill applications in contact with waste leachate

Bridging voids

Using Robutec® offers further distinct advantages:

- ➔ underwater installation without floating problems (PVA being denser than water)
- ➔ individual lengths can be sewn together to assist load transfer
- ➔ setting out drawings on request
- ➔ custom-made lengths to suit specific site requirements

Robutec® - guaranteed quality

Robutec® is manufactured by HUESKER Synthetic. Longitudinal and transverse tensile strengths can be tailored to suit your project-specific requirements. HUESKER Synthetic would be pleased to provide you with expert advice on the choice of Robutec® fabric. Assistance with design calculations can be provided by our engineering department. In-house and third-party monitoring in accordance with DIN 18200 ensures the high quality of the product.

Capping a sludge lagoon

Robutec® is a registered trademark of HUESKER Synthetic GmbH.

HUESKER Synthetic GmbH is certified by:

HUESKER offers a wide range of technically demanding solutions relying on our many years' experience. Our solutions are economical, reliable and up-to-date and used in:

Earthworks and foundation engineering, landfill construction, hydraulic engineering, road construction

Technical assistance, planning, support - worldwide
Reliable and advanced techniques characterise our products in many applications:

Fortrac® - a flexible, high-modulus and low-creep geogrid for soil reinforcement

HaTelit® – a flexible, high-modulus and temperature-resistant grid for asphalt reinforcement

Stabenka® – a high-modulus polyester woven for reinforcement and separation of soils

Robutec® – a very high-modulus and alkali-resistant woven for reinforcement and separation of soils

Fornit® – a biaxial geogrid for subbase reinforcement

Comtrac® – a geocomposite for reinforcement, separation and filtration of soils

Duogrid® – a geocomposite made of biaxial high-modulus, flexible geogrid and a nonwoven

Incomat® – a concrete- or sand-mat for sealing

Ringtrac® – geotextile tube for reinforcement

and soil containment

filtration, drainage and protection

and dewatering

**Geosynthetics made by HUESKER
- reliability by experience!**
